► Head Floats

► Head Floats

Head floats are designed as a buoyancy device at floating hose lines to bear the end load of the male hopper connection part.

Hopper connection Head Floats manufactured out of closed PE foam, coated with high wear resistant PU coat, reinforced by high tensile fibres.

EMSTEC Head Floats are also available as a Stainless – Steel Construction.

Available in major requested dimensions and buoyancy, applicable for various pipe sizes .

i Special application on request ▼
